226 obtained from unaugmented Kern, near present town of Kernville.

Fishing techniques and use of certain localities for fishing varied according to height of streams and temperature of water; location of few fish camps noted (p. 40). In spring before water too warm, fishing carried on at sites on augmented Kern. At rapids near w. end of gorge "there were lots of fish; the Tolowim (Bankalachi) used to camp there to fish, also the Tejon Indians (Yokuts) and Pahkanapil too. Sometimes the Monilabal and Palabatal (Yokuts groups) came up there to fish" (SM). Groups of Tübatulabal also camped at rock paintings farther upstream; fish harpooned from rocks mainly at these locations as water swift-running, with many pools.

[411] [227] Pronged harpoon California type (Kroeber, Handbook, 86) consisting of pole (mi·št) 7-8 ft. long, with pair 6-in. foreshafts; toggleheads (wili·li·nist) 1 1/2 in. long, carved from deer bone; heads sharply pointed, barbed. Later in summer fishing activities shifted higher up river to sites on unaugmented Kern and to mt. lakes and streams. Round nets made of native twine, with 3-4 in. meshes and lacking handle, were used, being held up on each side by 2 men standing in water (FP); SM denied use of nets. Large nets, similarly made, stretched across stream, held up by 4 men (PN, FP). Net sinkers not used (FP, PN). Tule basket trap (wa·mat), similar to Pomo trap (Kroeber, Handbook, 172, pl. 33a), used in smooth water. Fish taken in nets speared (PN). Fishhooks [321] (wele·haništ) were said to have been 2-piece, with single bone barb made from shank bone of deer. Barb filed to point on rock, blunt end attached at 45° angle to base of shank with wrapping of native twine which was given coating of [283] asphalt to make it fast. Line made from native twine, smeared with asphalt; attached to end of long willow pole (wipšat). Earthworms, grasshoppers used for bait (tï·hat). Fishhooks and pole "not used very much" (SM); post-white (?). No double hooks, gorgets used.

226 476 417 Bulk of communal fishing in streams, rivers done to obtain fish for drying. Informants dwelt upon one method of communal fishing, although it is no longer practiced. Fish corral (pa·nil) built in shallow, fast-running water (fig. 2), "when there were lots of fish running." Wall of corral 2 1/2-3 ft. high; built up of large stones filled in with willow branches; diameter of round enclosure 7 ft., width of opening to corral 3 ft. Men went about 2 mi. downstream from corral, threw stones in water to drive fish upstream. Two men, stationed on either side of gateway to corral, beat water with long willow poles so that [462] all the fish would swim into corral. Inside corral 2, 3 men bailed out fish, throwing them up on bank to women who collected them in large pile. Each participant in undertaking shared equally in distribution of fish, which was effected in same manner rabbits apportioned after drive (p. 13).

226 Another method of obtaining fish in large

T 323 [171] as thick as thumb laid around upturned edge of circular base and one roll after another used to build up side of pot as among Yokuts (Gayton, 1929, 242). Inside and outside of pot smoothed with fingers only (SM, FP); twig, chip, or acorn husk "might have been used a little" (FP), but small polishing stone such as Yokuts employed (ibid., 243) not used, nor were fingers dipped in syrupy substance while smoothing pot as among Owens Valley Paiute (Steward, 1933, 267). After pot shaped and smoothed it was sun-dried and then put on "a blazing fire made from any kind of wood"; pot allowed to get "red hot" (FP); firing caused clay to turn gray-black (SM, FP). T [171] After cooling, pot ready for use; coating acorn mush (Gayton, 1929, 245) not given it. SM had seen Tübatulabal pots shaped like middle and right-hand specimen in upper row of Yokuts pots pictured in Kroeber's Handbook, 530, pl. 51, but had never seen incised lines, such as those on Yokuts specimen, on any Tübatulabal pottery.

T 415 Pots were used for boiling meat, small game, whole piñons and buckeye nuts, tobacco stalks; T [276] FP said that occasionally acorn mush cooked in them although it was usually stone boiled. Pottery pipes not made (SM), cane cigarette pipes T [53a] being used for smoking; FC had seen old Koso woman make clay pipes for her own use. Little girls sometimes made crude unbaked (SM) clay [85] dolls (a·na·wišti·l) from red clay; SM thought such to have been aboriginal; children also occasionally made animal figures of clay, baked them (Voegelin, 1935 b, 227). Although pottery generally made by women, MM as boy had tried to make pots, but his cracked when heated, whereas "old-time pots were so hard they wouldn't break if you threw them down or hit them with a rock" (MM).

T 171 Contiguous distribution of this type of pottery limited to a few Calif. and Great Basin tribes (Gayton, 1929, 248, fig. 3; Steward, 1933, 269).

T ● 321 Horn objects.- Mt. sheep horn used as container for pounded tobacco and lime (see section on Tobacco); spoons (ta·mil) "shaped like a kitchen spoon" were made from antelope horn, using base of horn for bowl; "men and women used spoons for eating acorn mush" (SM); FM denied use of spoons.

T 324 Steatite objects.- Stone olla, 3 ft. high, "carved out of rock," was mentioned by FM, who said his father had found it among boulders on C T hill behind Jesus ranch in South Fork valley 40 756 yrs. ago. FM could give no further details.
177 Small steatite bowls and tubular pipes with bird-bone mouthpieces (pl. 1a) used as part of [321] rain doctor's outfit. Outfit pictured, now in possession of SM, inherited by him from his stepfather, Francisco Sasterray, Tejon Indian (probably Chumash); this makes these objects foreign importations among Tübatulabal; however SM said
